

A little update from Wegener Welding

EDUCATION

In our continuing efforts to provide the most comprehensive package of thermoplastics welding equipment and education, we were happy to see a great participation in this year's DVS (German Welding Society) Certification Courses which we offer every September. Indeed, this year the participation and interest was unsurpassed and we again saw a number of certified welders return for recertification to keep their status up to date. We are very pleased that our participants continue to confirm that this type of education is a worthwhile investment and raises the market acceptance of welded thermoplastic structures and items to a more professional and trusted level. The picture shows Rudi Schott, the DVS Certified Welding Instructor from SKZ (www.skz.de), Wuerzburg, Germany, with a group of students.

FACILITY

Another highlight this summer was the remodeling of part of our facility. The new layout and set up are not only ideal for the welder training courses but also allows us to keep various welding and bending machines on the floor for demonstration and process validation purposes. Should you have a project that involves butt welding of sheet or pipe or bending/90° corner welding we would be happy to assist you on validating the process and evaluating your return on investment. Our machine product range offers a multitude of various styles with options to fit most requirements and applications. It would be our pleasure to work with you on evaluating how they can benefit you to achieve highest weld quality most productively.

Trusting you as well had a good summer we kindly ask you to contact us any time we can be of service.
Your Wegener Welding Team
